

# The Divorced Billionaire Heiress Boss

Chapter 2235

□ □ □

Chapter 2235 She's An Experimental Product Sebastian smiled.

"That's because I met that lady when I went to Southeast Asia to attract investment. I was the one who helped her fine-tune her surgery."

"Fine-tune? That's more like changing a face, right?"

Nicole could not help but said sarcastically.

Suddenly, everything in the past made sense.

Unexpectedly, the person who helped Angie with her plastic surgery turned out to be Sebastian.

However, he was really skillful.

Nicole had to admit that even the most advanced plastic surgeon could not compare to him.

They did not notice any hints of Angie having undergone plastic surgery.

This proved how successful her plastic surgery was!

Sebastian smiled modestly.

"It's not that bad. But look at her."

Sebastian introduced Yasmin to everyone as if he was introducing his baby.

"She's our experimental product and the most successful one of them all."

"What do you mean?" Someone asked.

Eric stared blankly at the side and said, "Isn't she already dead?"

Everyone looked over in horror.

Sebastian nodded.

"She was already dead, but I brought her back to the laboratory after a 72-hour journey. I changed her blood and customized the

damaged internal organs for her. As you can see, she's now standing here alive and well before us!"

Everyone looked at the two in shock.

It was really unbelievable.

This was simply beyond everyone's understanding.

Eric looked at Sebastian indifferently.

"Why her?"

"Because someone has already replaced her, so no one will pay attention to the real Yasmin."

Sebastian smiled and explained lightly.

He looked at the others.

His voice became serious.

"Everyone, people go through the natural circle of life, but who doesn't want to live a few more years? This is especially true for

rich and powerful people like you who have worked hard all your lives and have enough money to last you several lifetimes.

When the time comes and you're suffering from an illness on your deathbed, will you really pin all your hopes on your coldblooded and ruthless family members?"

Everyone looked cold.

Facing this, a few rich and powerful guests could not make any jokes.

Sebastian continued, "What you saw just now was very gruesome, but when you see this living person standing here, do you still

feel like it's cruel? The ocean is the wealth bestowed upon us.

I only used the sea creatures and extracted the genes and tissues that are beneficial to humans to recreate the human body with the most cutting-edge technology according to the individuals' needs.

The white inked shark lives in the depths of the ocean and is extremely rare, but it has a gene that can activate dead human

nerve cells. Isn't this discovery enough to change the entire human race?"

Everyone looked at him in shock and disbelief.

Everyone seemed to lose sympathy for the fish that were killed in the laboratory.

Instead, their faces were tinged with excitement, mystery, and a little doubt.

Only Nicole's heart kept sinking.

She never expected Sebastian to have such an idea.

"Everyone, I won't lie to you. Yasmin was indeed dead. Please take a look.."

Sebastian used the remote control to turn on the projector in front of him.

It showed a record of Yasmin's journey to the laboratory and her surgery.

The video was very long, but it was edited and accelerated.

However, everyone was obviously moved when they saw it.

Yasmin lay lifeless on the bed with a sign that said, "The 90th hour of death."

In the next clip, someone began to replace Yasmin's kidney with a new kidney.

The surgery began.

Sebastian paused for a while and said, "Our privately customized organs are different from those currently on the market. It won't

have any transplant rejections, and it's integrated with nanotechnology to monitor the body's vitals at all times. It imitates the

body's immune system so that your body doesn't reject the new organ."

Zuthi asked to clarify his doubts.

"Then is this organ real or fake?"

Sebastian smiled.

"It doesn't matter if it's real or fake as long as it works, right?"

Zuthi said, "No. If it's fake, won't the body be filled with plastic? If it's true, what's the raw material of those organs?"

Sebastian smiled mysteriously.

He did not want to reveal too much and only said a few words, "Our custom-made organs are no different from the body's

organs. They're not made of metal or plastic. They're real blood and flesh!"

Another person asked, "Is it human blood and flesh?"

Sebastian restrained his smile.

"Everyone, this is considered a business secret, so I can't reveal it unless you decide to become our partner.

However, I'll give

you all a gift so that you won't make this trip in vain."

He said as he led them toward a wall.

The wall was at a 120-degree angle, which was weird.

Besides that, it looked ordinary, and there was nothing special about it.

Sebastian reached out to one of the skinny yet dignified bosses.

"Mr. Quay, you should stand there for a while, then you'll] know.

Everyone, you should go and stand there for a while to find out the current state of your body so that you can get timely treatment."

George Quay did not believe it at first and walked over impatiently.

His gait was weak, and he did not seem to have much vitality and strength.

Nicole frowned slightly.

She remembered from her background check on the guests that George had cancer.

The next moment, George went to the corner.

Sebastian handed him a pair of earphones and explained with a smile, "This is your privacy, so we won't disclose it to others. You can listen to it yourself."

George's face was insipid and puzzled as he put on the earphones.

After a few minutes, George gradually became serious.

Finally, he held his chest and breathed excitedly.

Immediately afterward, he anxiously looked at Sebastian in surprise.

Everyone was puzzled by George's fluctuations in emotions.

However, George took off the earphones.

He ran up to Sebastian excitedly, lowered his voice, and said, "Can you really change my heart? Although I had a successful

heart transplant, I still have to go to the hospital regularly every year, and my condition in the past two years has deteriorated

greatly. I feel like my body is starting to reject my new heart."

Sebastian nodded with a smile, lowered his voice, and said, "Yes, we can. Our custom-made heart won't cause a rejection

reaction because this is black technology made from the rarest marine animal. Only young white inked sharks have genes that

won't be rejected by the human body, and it takes 10,000 young sharks to customize this heart. George, our results aren't

groundless, and they all come at a price."

George stood there excitedly. His deep eyes lit up with hope, greed, shock, and infinite joy.

"Okay. If what you said is true, I'll invest in this project. Money isn't a problem because I have plenty of money!"
