

According to the logic formulated by Trent and other weapon experts, they first set the entire copper mine wall as a first-level alert area, and then set the "back"-shaped area within 200 meters based on the copper mine wall, set as the level two alert range.

Once this recognition system is activated, all living bodies that enter the "back"-shaped area from the outside will immediately trigger an alarm. While the system sends an alarm to the operator, the system will automatically lock the external target, and the system locks the target, close to the anti-cannon. It will also be synchronously locked.

At this time, the operator can immediately press the fire button. Once pressed, the three close-in defense guns will launch shells in the direction of the target and around the target in a swirl-shaped trajectory.

Taking advantage of the near-defense guns not being loaded, Trent found several Xiao cavalry guards and asked them to wait outside the second-level alert range.

When the system was activated, he used the walkie-talkie to let one of these Xiaoqiguards (Bickford guards) (Bickford guards) run into the second-level warning range, and saw that the person had just entered the second-level warning range, and the system immediately started to give an early warning. Follow him, wherever he goes, the muzzle will move towards his position in real time. Seeing this effect, Abbas couldn't close his mouth from ear to ear in shock, and blurted out, "If this is loaded, just press the switch, wouldn't the locked target be wiped out?"

"Yes." Trent nodded, and said, "This identification system is still very powerful, there is almost no delay, and coupled with the fast firing rate of the shells, it is estimated that it is impossible to escape." At this time, a

Wanlong The weapon expert of the temple said, "Hallmaster, the trajectory of these three cannons needs to be fine-tuned. Considering that the target may be very strong and the movement speed may be very fast, if the three cannons are all chasing him, it is really possible to chase him." Not on him."

"Yes." Abbas nodded and said, "I don't know how strong the earl of the Poqinghui will be, the stronger the person, the more agile the body, so when you lock the target, you must We need to hit the lead well."

The weapons expert laughed, "We not only need to make good lead, but when the time comes, the gun in the middle will chase the target and sweep back and forth horizontally from left to right, shooting a horizontal trajectory, and the other two guns will Circling around the target and firing two circular ballistics, the ballistics formed by these three cannons will quickly chase the target clockwise or counterclockwise as a whole."

He said, pushing the glasses on the bridge of his nose, pointing to the glasses Said, "The overall ballistic is like the shape of my glasses, and it is a glasses-shaped ballistic that keeps moving in a circle around the center point. The system will always set the target at the center of the glasses. In this way, he will flee in any direction. It's impossible to escape."

Abbas murmured, "The shape of the glasses, the constantly rotating ballistic trajectory...is that what it means..." "

Yes." The weapons expert said, "Three cannons can chase Aim at the target and shoot a super large barrage with full coverage. This barrage is not the barrage posted by netizens on the video website.
